### Abstract

The present study examines the spatial and temporal changing in land use pattern in NCR Haryana part during the period 1979-2015. The paper is based on secondary source of data, which is collected from statistical abstract of Haryana and the pattern has been analysis and inter pretention with the help of correlation matrix, Tables and maps.

**Key-Words :** Land Use Pattern.

### Introduction

After independence, the influx of refugees from Pakistan and the burgeoning population put immense pressure on the weak infrastructure of Delhi. The haphazard development rubbed salt to the sore wounds of Delhi, which was already bursting at its seams. To ease this pressure, the master plan for Delhi, (notified in 1962) envisaged developing the city as a metropolitan region, a broad area consisting of the National Capital Territory (NCT), and a few ring towns around it. This became the geneses of the National Capital Region (NCR). The National Capital Region Planning Board was constituted in 1985 in accordance with the recommendations of the Master Plan. It authorized a plan for the development of the National Capital Region and prepared to organize and supervise the implementation of such a plan with the objective of evolving harmonized policies. Specific attention was given to the control of land-uses and development of infrastructure in the region so as to avoid any haphazard development thereof. The national capital region Haryana part NCR-Haryana spreads over an area of about 13,413 km<sup>2</sup>. The Culturable land of NCR is continuously being brought under industrialization. New townships are being built in NCR territory as land industries in the NCT are being relocated and some of these industries are being established in NCR territory of Haryana by Haryana State industrial Development Cooperation (HSIDC). This has led to alteration interest for agricultural geographers as to what extent the land use pattern has been lateral and how it has influenced the agricultural land use. Moreover, which are the areas of NCR territory most affected by this changing land use pattern.

### Objectives of the study:

Following are the objective of the present study:

1. To evaluate the land use of NCR and impact of urbanization-industrialization on the general land use in the region.
